EXPERIENCE

January

New York, NY

Software Engineer

October 2024 – Present

- Lead Voice AI team building humanistic AI agents that handle borrower-facing contact center calls end to end, mirroring live support agents across authentication, contact verification, one time payments, payment plans, settlement negotiations, and dispute filing; \$1M+ in payments, 100K+ calls, and scaling quickly
- Instrumented evaluation and tracing for production voice agents via Langfuse, with evals running on every live call
- Integrated new enterprise client workflows into the platform as data pipelines (CSVs, API calls, and spreadsheets standardized into schemas at high volume, on schedule)
- Replaced in-house cron scheduler with a Temporal-based solution for Automat (January's client operations workflow engine), cutting P95 workflow kickoff latency from 3 minutes to 3 seconds (60× faster)
- Built core infrastructure for one-time and recurring user payments using durable execution and webhook handling; shipped Google Pay via Checkout.com as 1 of 2 engineers; processed \$5M+ since November 2025 launch

Google

Los Angeles, CA

Software Engineer

August 2022 – March 2024

- Owned and launched indexing infrastructure for YouTube Shorts hashtagged videos end to end, integrating batch and streaming C++ pipelines to sort and surface content across all Shorts hashtag pages (example: youtube.com/hashtag/owen/shorts)
- Developed internal TypeScript tooling to display trending Shorts videos for human review, integrating Google Sheets data with a review dashboard
- Refactored data modules, developed dashboard metrics, and performed data analysis for YouTube Hashtag insights

Amazon

Seattle, WA

Software Development Engineer Intern (x2)

May 2020 – August 2021

- Enriched Prime Video's 7 million title catalog with 5× more metadata via IMDb bulk datasets, using Spark and AWS (Elasticsearch, S3, DynamoDB, Lambda, Glue, Step Functions)

EDUCATION

University of California, Berkeley

Berkeley, CA

Bachelor of Arts in Computer Science, Applied Mathematics | GPA: 3.8/4.0

August 2018 – May 2022

- Held teaching assistant positions across several of the largest Computer Science courses on campus, including Head TA for Computer Science Pedagogy
- Alum of Upsilon Pi Epsilon (UPE) CS Honors Society (invited to top 1/3 of UC Berkeley CS majors)
- **Relevant Coursework:** Machine Learning, Artificial Intelligence, Algorithms, Computer Architecture, Advanced Linear Algebra, Real & Complex Analysis, Numerical Analysis, Abstract Algebra

SELECTED PROJECTS

Where in the World | *TypeScript, Next.js, PostgreSQL, Tailwind, Mapbox*

- Full-stack application to track the home, visited locations of family and friends around the world locally on device
- Includes features to search by person, search by location on map, filter set of people by tags, star or unstar profiles, and Mapbox UI to display people who reside or have visited certain cities or countries ([Github Link](#))

Basketball Highlight Generator | *Python, YOLO*

- Built a pipeline that auto-generates made-shot highlight reels from raw game footage, combining YOLO ball detection with rim-plane crossing logic to identify made baskets ([Github Link](#))

SKILLS AND INTERESTS

Languages: Python (+ data libraries), TypeScript, C++; Familiar with: Go, SQL, Kotlin, Java, Scala, JavaScript

Tools & Frameworks: Claude Code, Git, Docker, AWS, Temporal, Snowflake, Datadog, Vapi, Langfuse

Interests & Hobbies: {classical, electric} x {piano, violin}, [blogging](#), basketball, drone videography
