EXPERIENCE

January

New York, NY

Software Engineer

October 2024 – Present

- Replaced in-house cron scheduler with a Temporal-based solution for Automat (January's client operations workflow engine), cutting P95 workflow kickoff latency from 3 minutes to 3 seconds (60× faster)
- Led observability buildout for Automat across 500+ workflows; instrumented traces, metrics, and Datadog dashboards spanning workflow health, client metrics, and underlying infra (AWS SQS, EC2, Temporal, Celery)
- Built core infrastructure for one-time and recurring user payments using durable execution and webhook handling; shipped Google Pay via Checkout.com as 1 of 2 engineers; processed \$2M+ since November 2025 launch
- Joined Voice AI team in building a human-realistic voice agent to handle contact center calls, one-time payments and payment plans in English and Spanish. Has handled 100k+ calls and \$400k+ in payments and scaling quickly

Google

Los Angeles, CA

Software Engineer

August 2022 – March 2024

- Launched and maintained indexing infrastructure for YouTube Shorts hashtagged videos, integrating batch and streaming C++ pipelines to sort and surface content (example: youtube.com/hashtag/owen/shorts)
- Developed internal tool in Typescript to display trending Shorts videos for human review from Google Sheets
- Refactored data modules, developed dashboard metrics, and performed data analysis for YouTube Hashtag insights

Amazon

Seattle, WA

Software Development Engineer Intern (x2)

May 2020 – August 2021

- Built proof-of-concept feature for Prime Video generating metadata suggestions (e.g., "Action movies with a dark mood directed by Christopher Nolan") by integrating Nielsen survey data with the catalog
- Enriched Prime Video's 7M-title catalog with 5× more metadata via IMDb bulk datasets, using Spark and AWS (Elasticsearch, S3, DynamoDB, Lambda, Glue, Step Functions)

EDUCATION

University of California, Berkeley

Berkeley, CA

Bachelor of Arts in Computer Science, Applied Mathematics | GPA: 3.8/4.0

August 2018 – May 2022

- Held teaching assistant positions across several of the largest and most essential Computer Science courses on campus - Structure of Computer Programs, Data Structures, Algorithms, Computer Science Pedagogy (Head TA)
- Alum of Upsilon Pi Epsilon (UPE) CS Honors Society (invited to top 1/3 of UC Berkeley CS majors)
- **Relevant Coursework:** Machine Learning, Artificial Intelligence, Algorithms, Databases, Data Structures, Computer Architecture, Computer Graphics, Discrete Math & Probability, Data Science (Intro and Intermediate), Linear Algebra (Intro and Advanced), Abstract Algebra, Numerical Analysis, Real Analysis, Complex Analysis

SELECTED PROJECTS

Where in the World | *TypeScript, Next.js, PostgreSQL, Tailwind, Mapbox*

- Full-stack application to track the home, visited locations of family and friends around the world locally on device
- Includes features to search by person, search by location on map, filter set of people by tags, star or unstar profiles, and Mapbox UI to display people who reside or have visited certain cities or countries ([Github Link](#))

Voice-Activated Smart Mirror | *JavaScript, Woodworking, Amazon Transcribe*

- Constructed from scratch a Raspberry Pi-powered "mirror" and custom wooden frame with desktop monitor enclosed to display live modules updated throughout the day ([YouTube Link](#))
- Used open source modular magic mirror platform to connect to OpenWeatherMap, NYT, and NFL APIs

SKILLS AND INTERESTS

Languages: Python (+ data libraries), C++; Familiar with: Typescript, Go, SQL, Kotlin, Java, Scala, JavaScript

Tools & Frameworks: Git, Docker, AWS, Temporal, Snowflake, Datadog, Flask, Claude Code, Vapi, Langfuse

Interests & Hobbies: {classical, electric} x {piano, violin}, [blogging](#), basketball, drone videography
